DEPI React Frontend Web Developer

My training and project role

Training	React Frontend Web Developer, DEPI
Course outline	120 contact hours and 39 assignment hours
My contribution	Backend, course lesson page, video playback, topics and subtopics

Frontend subjects in the training

HTML5 and CSS	12 hours and 9 hours: page structure, styling and layout
JavaScript and TypeScript	15 hours and 6 hours: behaviour, asynchronous code and types
React and Bootstrap	33 hours and 12 hours: components, state and responsive interfaces
UX/UI principles	3 hours: clear navigation, feedback and usable screens

The supporting development skills

Prompt engineering	6 hours: clear goals, context, constraints and verification
Node.js and Express	9 hours: routes, middleware and JSON APIs
Code quality, Docker, testing and Git	3 hours each: maintainability, environments, checks and collaboration
Capstone project	3 scheduled contact hours, supported by assignment work

The project problem and approach

Learning needs practice

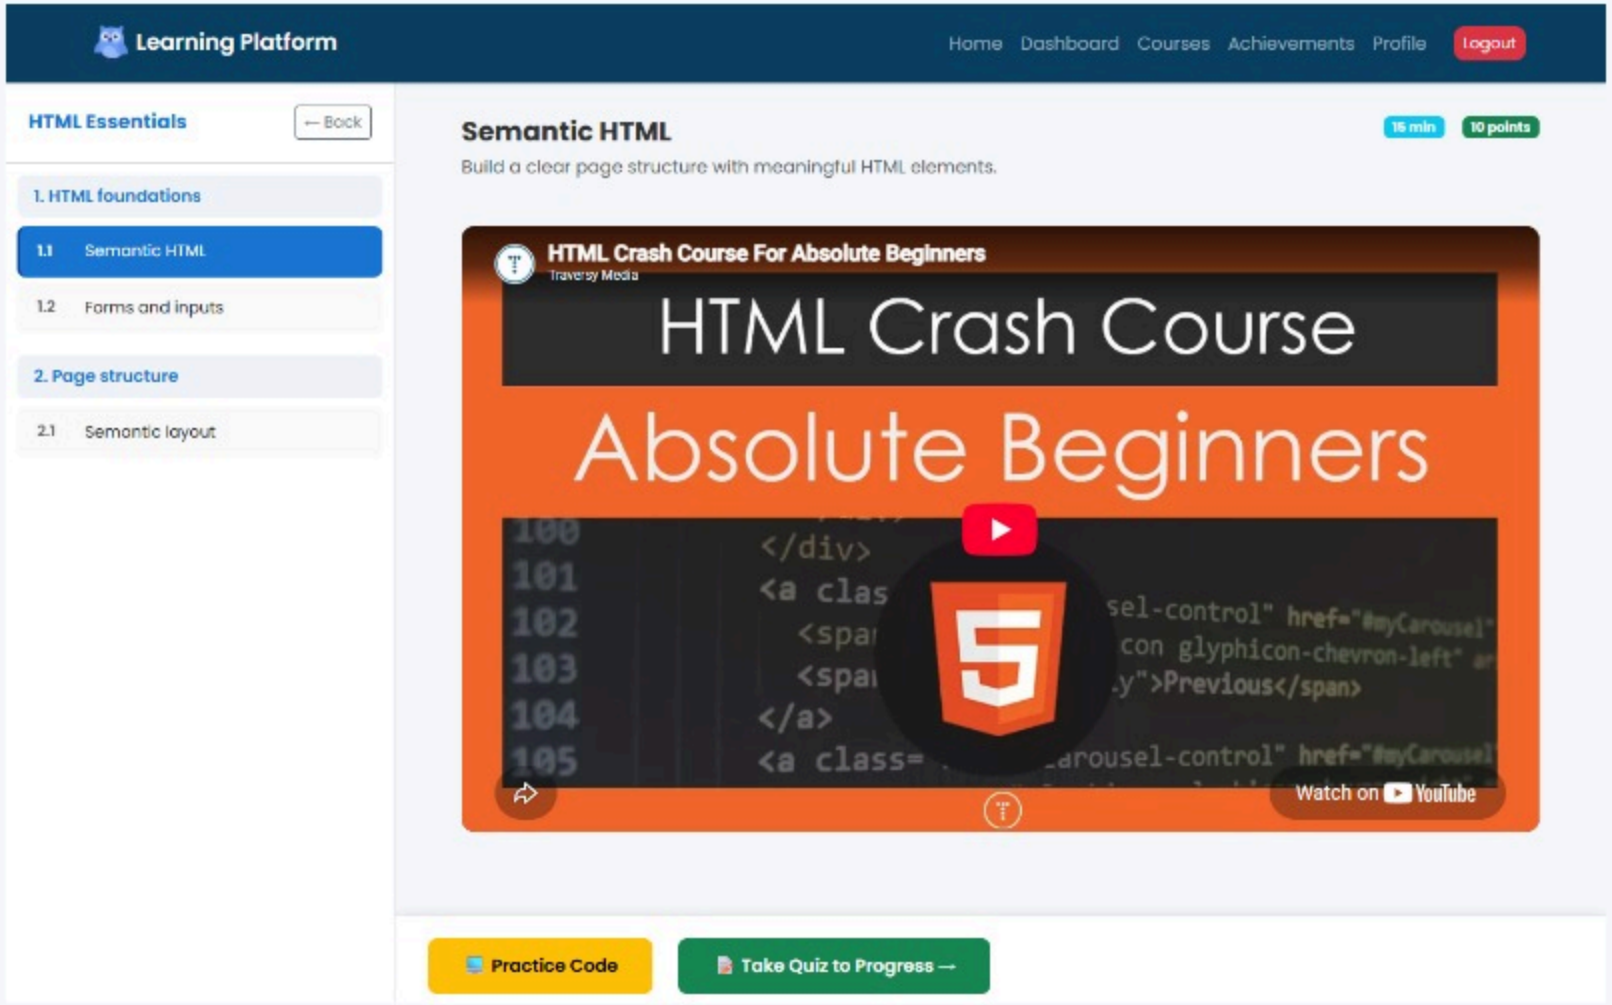

Our team combined video lessons, quizzes and code practice in one application.

Progress and achievements make completed work visible.

Application architecture

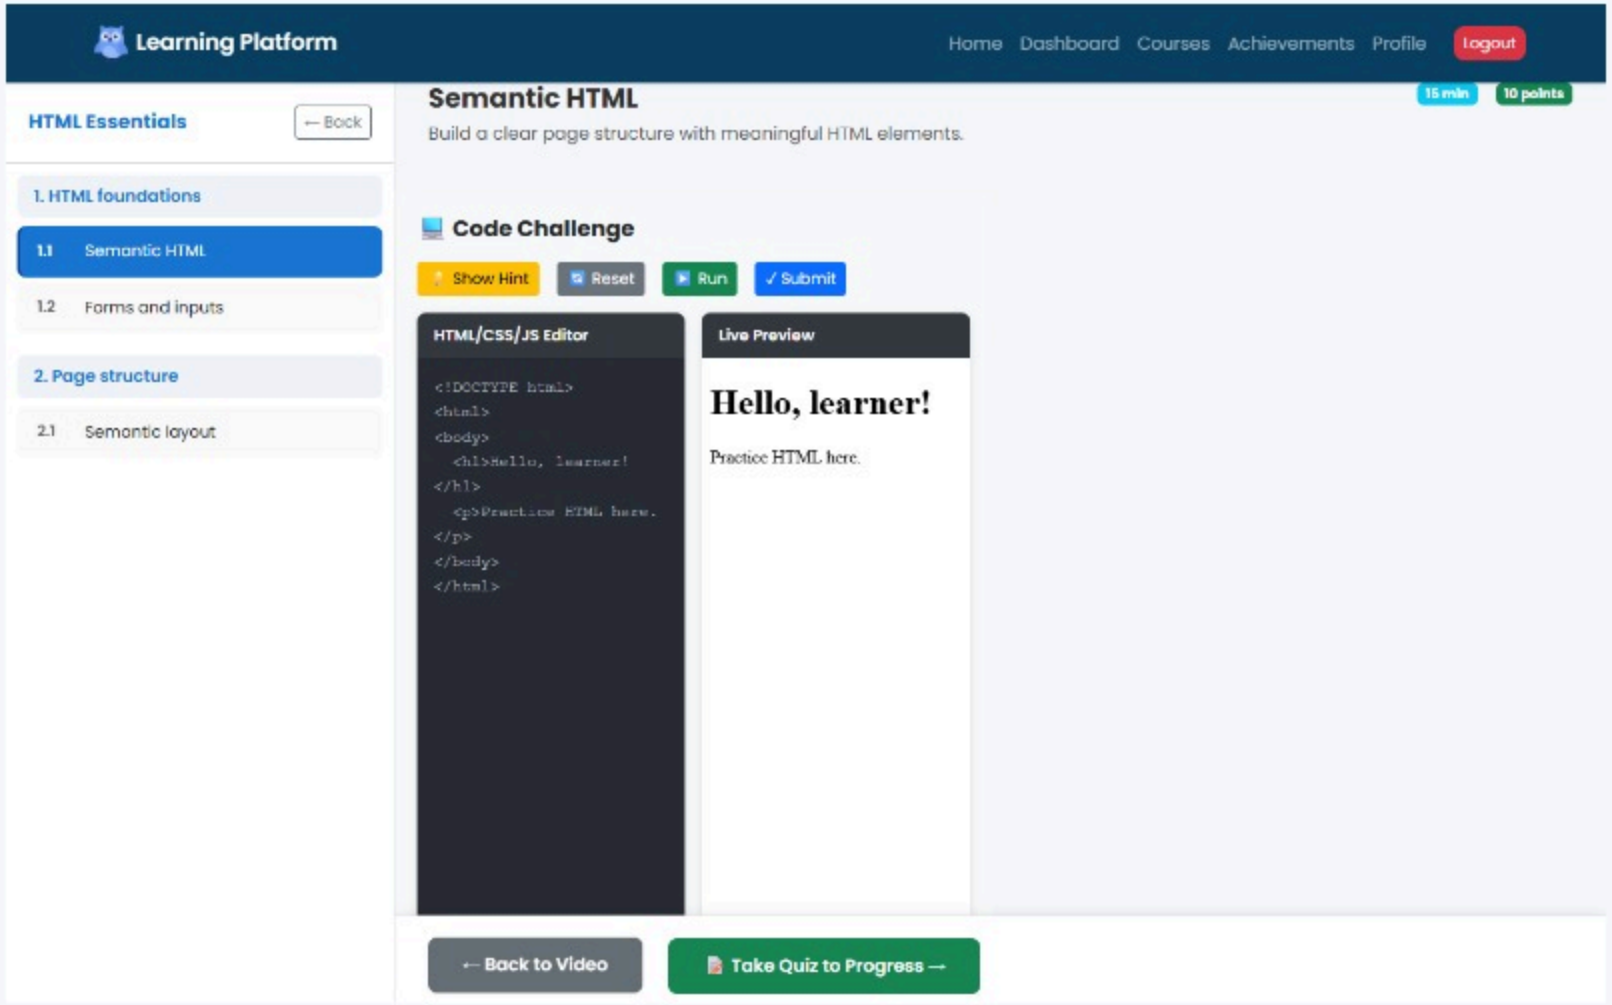

Browser	React 18, TypeScript, Vite and Bootstrap render the interface
API	Axios sends credentialed requests to Express routes and controllers
Database	Mongoose models persist users, courses, lessons, quizzes and progress
Identity	Express sessions use a cookie and a MongoDB session store

My lesson page

Actual lesson player with sample course data and an embedded YouTube lesson

Practice inside the lesson

Actual code practice screen with sample exercise data

How the training helped me

Real pages	I can turn a design into a responsive React page using components and Bootstrap
Live data	I fetch data from an API, show loading and errors, and update the screen
Debugging	I use the browser DevTools, console and build errors to fix issues step by step
Teamwork	We split the work, used Git and joined our parts into one application

Live demo

One click	run.bat prepares Node.js, the database and sample courses automatically
Sign in	A learner account that already has courses in progress
Learn	Open a course, watch a lesson and try the code editor
Progress	Take the quiz, then see progress and achievements on the profile
