DEPI · REACT FRONTEND WEB DEVELOPER

Interactive Learning Platform

My training journey, and the backend and lesson page I built for our capstone

Saif eldin Ahmed Helmy
Student code 420230168

THE TRAINING

My DEPI journey in numbers

159

hours of training

14

modules

33

hours of React, the biggest module

1

team capstone project

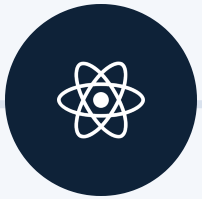

Foundations

HTML5 · CSS · UX/UI

Programming

JavaScript · TypeScript

Frameworks

Bootstrap · React

Backend & tools

Node · Git · Docker · Tests

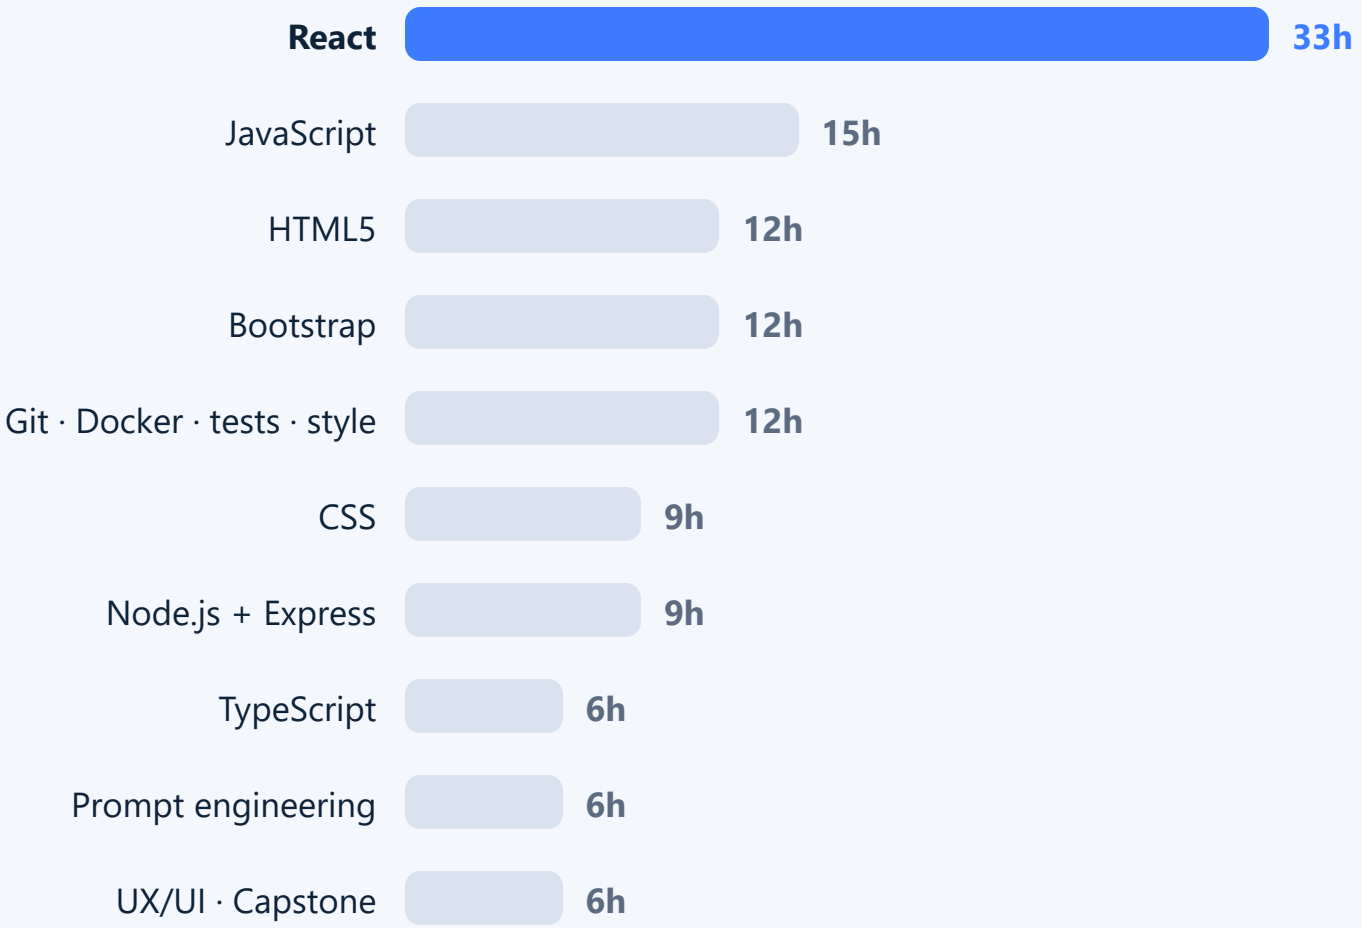

Capstone

Our learning platform

THE TRAINING

Where the 120 contact hours went

React was over a quarter of the course

- Components and props
- State and hooks
- Fetching data with Axios
- Routing between pages

BEYOND CODE

Skills that turn code into a career

Freelancing

- Finding clients
- Writing proposals
- Pricing my time

English

- Technical vocabulary
- Presenting ideas
- Interview answers

Writing a CV

- One clear page
- Projects and results first
- Tailored per job

Personal branding

- LinkedIn profile
- GitHub portfolio
- Sharing what I build

THE CAPSTONE PROJECT

Watching isn’t learning.

Our team built one place to watch a lesson, practise the code and prove you understood it.

Passive watching

Hours of video, little practice

No proof of learning

Nothing checks understanding

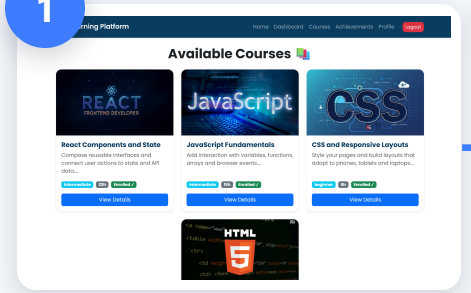

Scattered tools

Video in one tab, editor in another

THE CAPSTONE PROJECT

Learn → practise → prove it

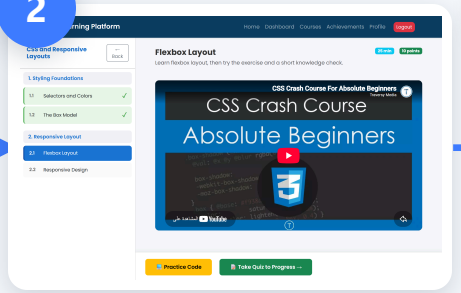

1

Pick a course

Catalog with levels

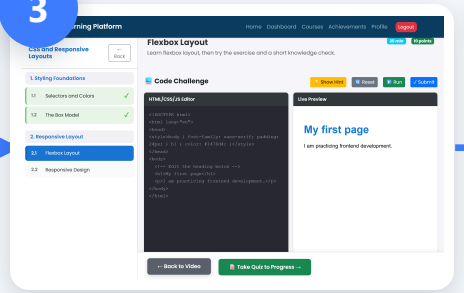

2

Watch the lesson

Topics and video

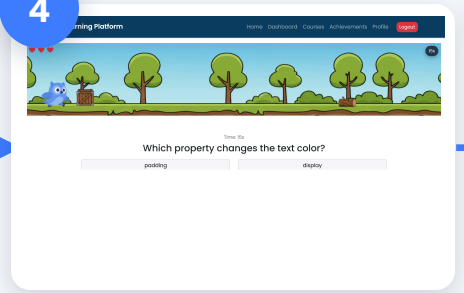

3

Practise the code

Editor + live preview

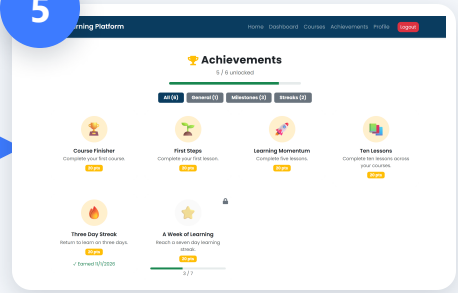

4

Pass the quiz game

Lives and a timer

5

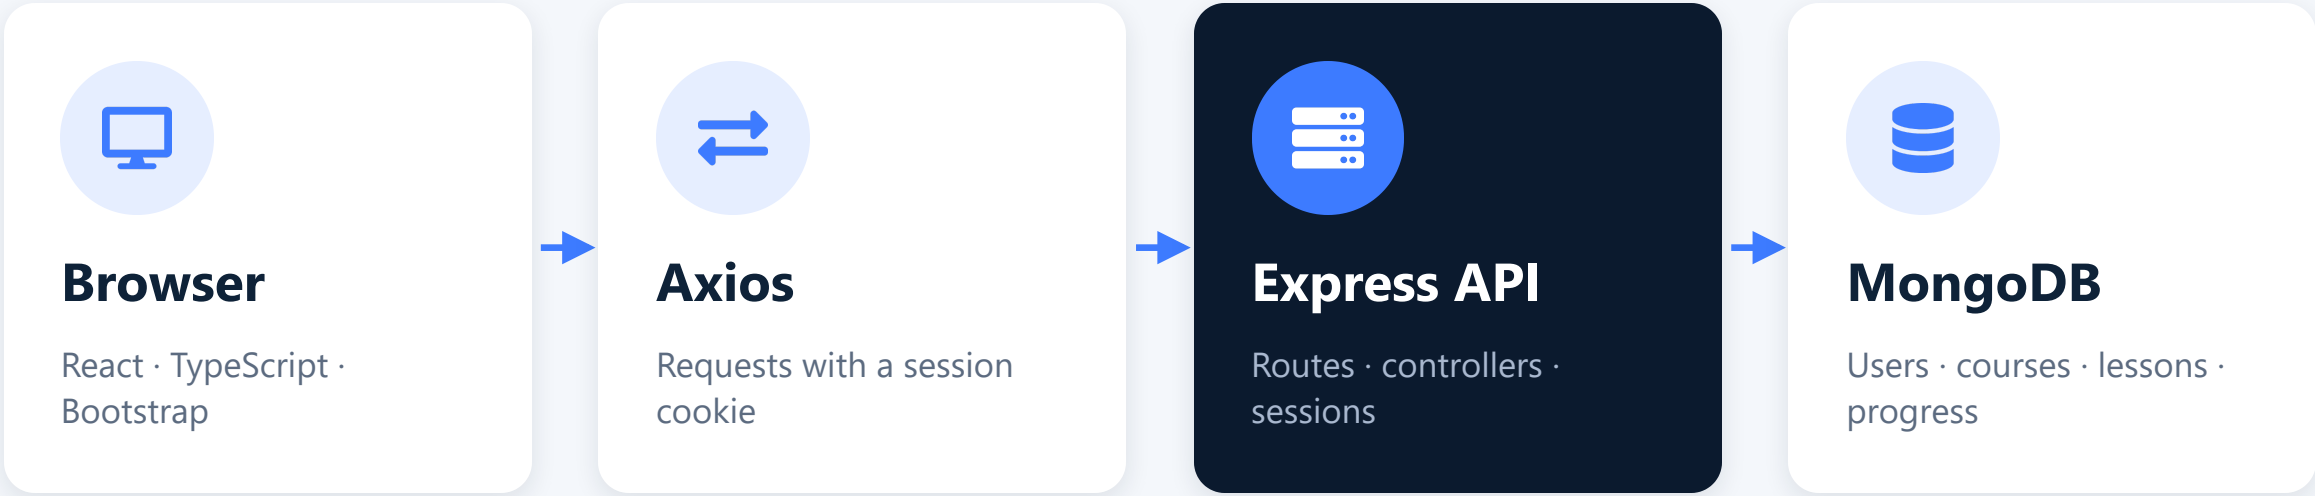

Earn badges

Streaks, tree, points

The rule that makes it active: you only move to the next lesson after passing the quiz.

MY PART · BACKEND

How the app fits together

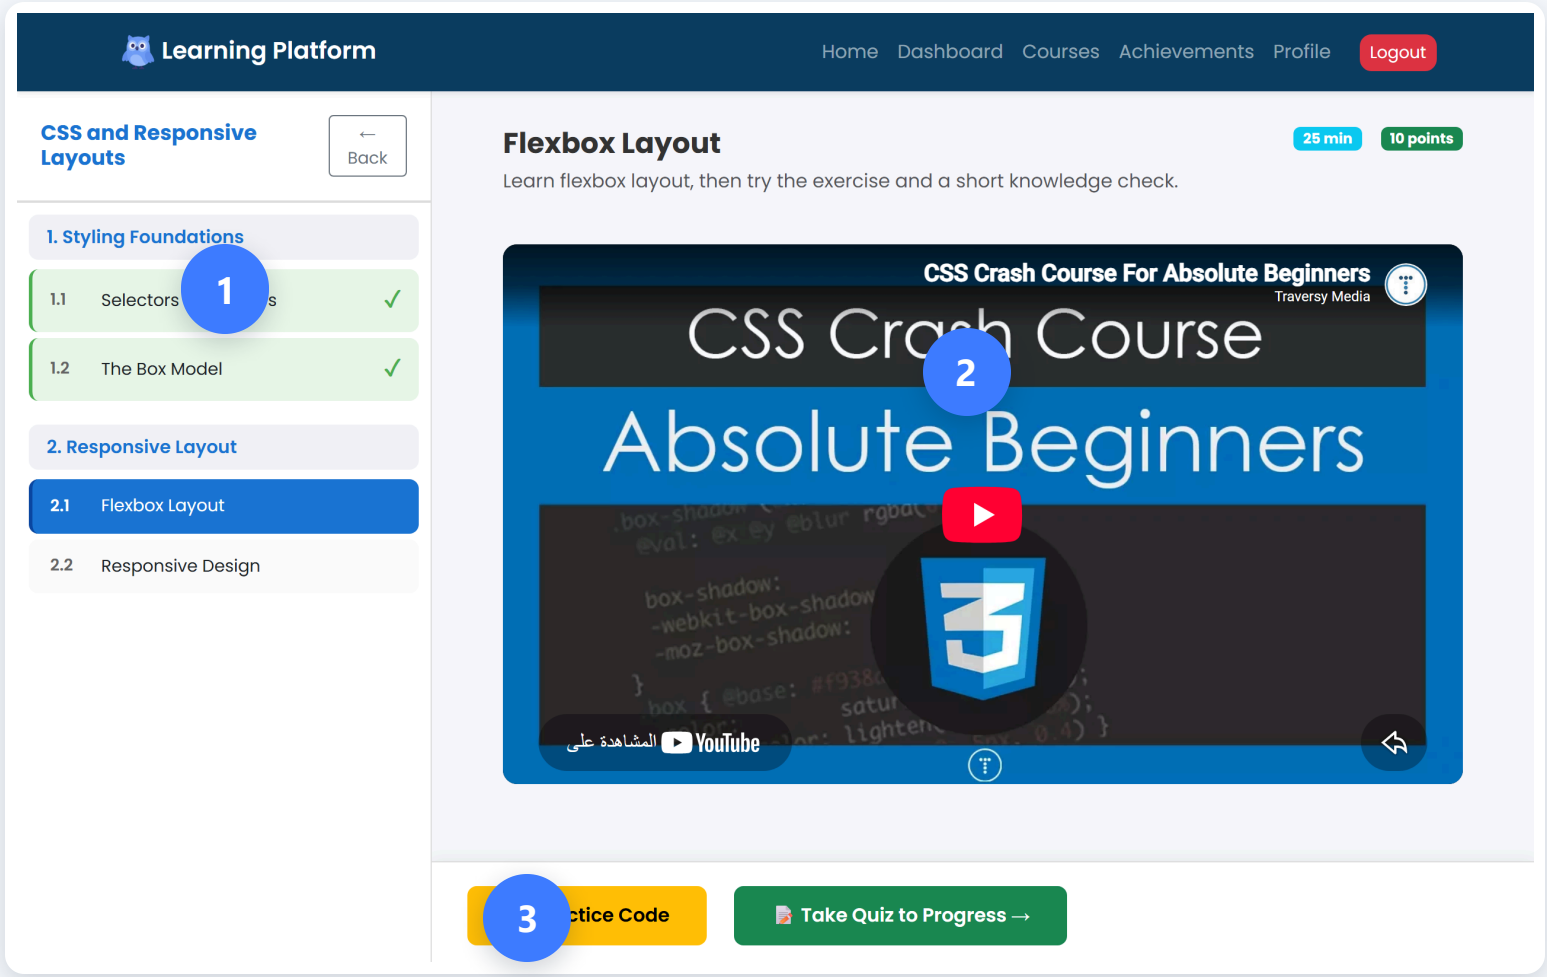

ONE CLICK, ONE ROUND TRIP

Open a lesson → `GET /api/courses/:id` → Read from MongoDB → JSON back → React shows it

MY PART · LESSON PAGE

The lesson page I built

1

Topics and subtopics

Lessons grouped by topic, with a tick for finished ones

2

Video lesson

Embedded YouTube that resumes where you stopped

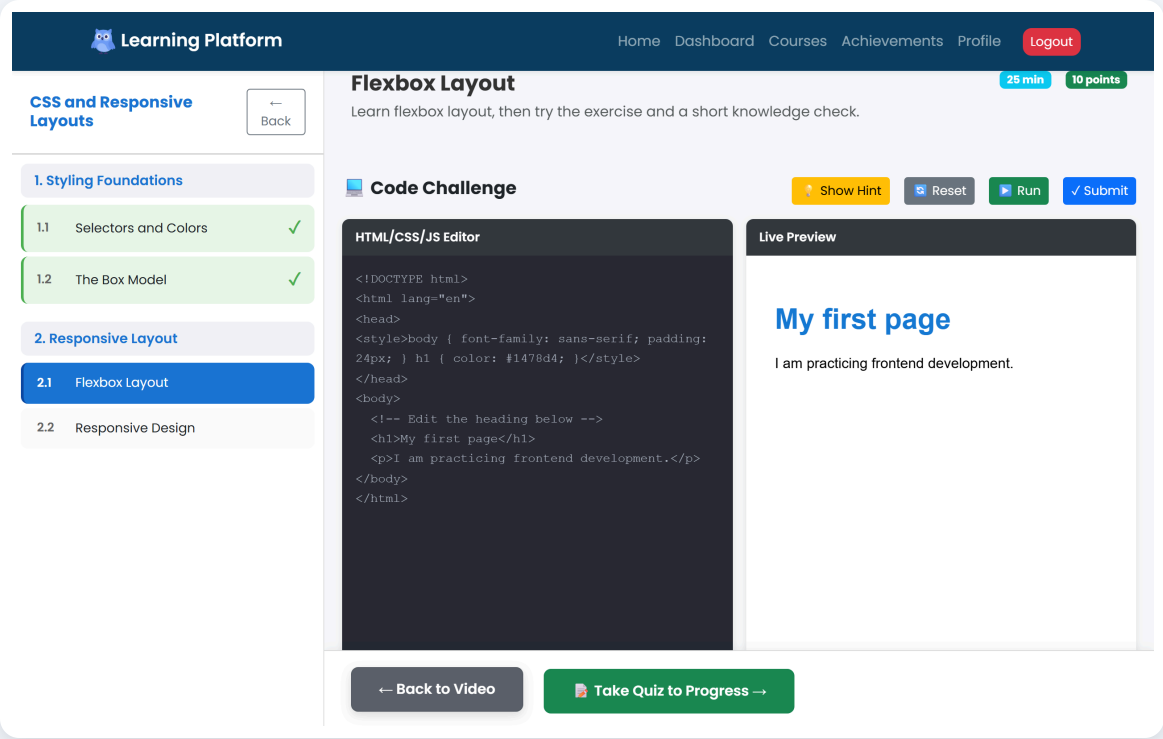

3

Practise or quiz

Both open from the lesson, no new tab

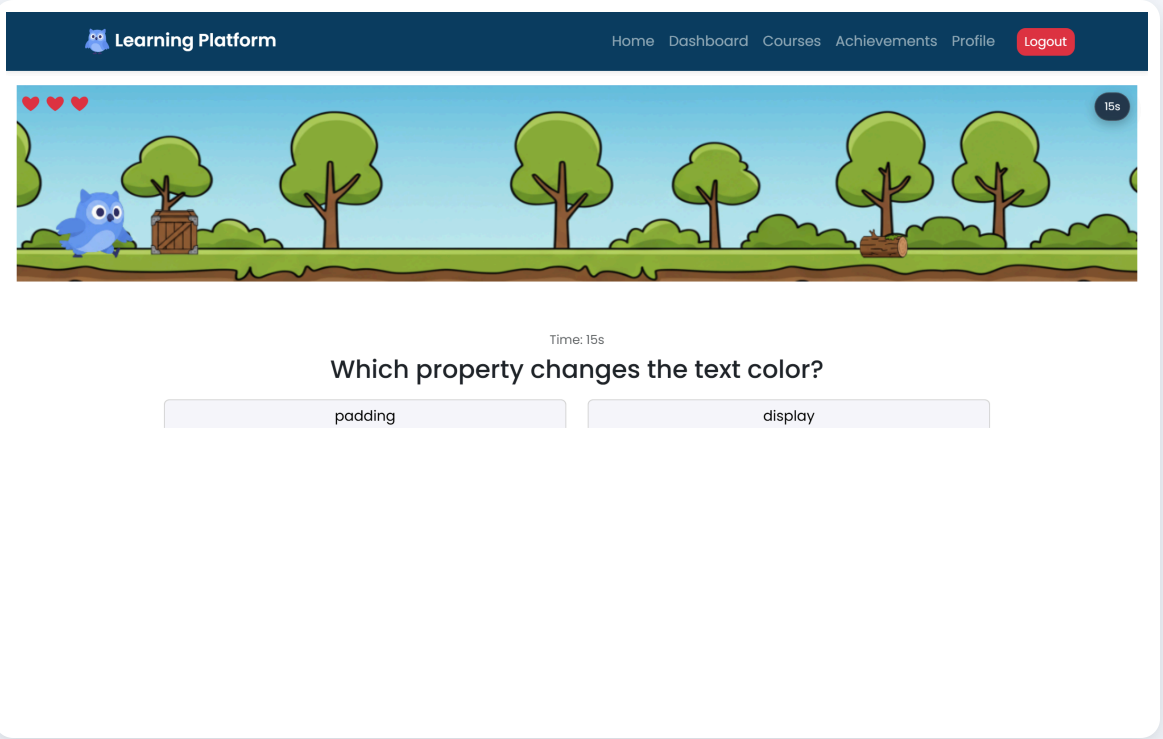

INSIDE THE LESSON

Practise it, then prove it

Code practice

Edit HTML and CSS, see the result instantly

Quiz game

Three hearts, a timer, and the owl jumps on correct answers

WHAT WAS HARD

Challenges and what they taught me

THE CHALLENGE	WHAT I LEARNED
Organising topics and subtopics	Plan how the data is stored before building the screen
Joining everyone’s code	Small commits and one owner per screen
Bugs I couldn’t see	Read the console and network tab before guessing

WHAT I GAINED

Before DEPI vs after DEPI

BEFORE

- Static pages in one big file
- Never connected a real database
- Mostly worked alone
- Guessed when something broke

AFTER

- **Build React apps from components**
- **Connect a UI to an API and MongoDB**
- **Work in a team with Git**
- **Debug step by step with DevTools**

LIVE DEMO

Let’s see it running

1. **Double-click run.bat**
   It starts the database and the app by itself

2. **Open a course and a lesson**
   Topics on the left, video in the middle

3. **Practise, then play the quiz**
   Correct answer: the owl jumps; progress is saved

Thank you — questions?
