DEPI · REACT FRONTEND WEB DEVELOPER

Interactive Learning Platform

My training journey, and the learner screens I designed for our capstone

Maaly Samir elsaied
Student code 420230295

THE TRAINING

My DEPI journey in numbers

159

hours of training

14

modules

33

hours of React, the biggest module

1

team capstone project

Foundations

HTML5 · CSS · UX/UI

Programming

JavaScript · TypeScript

Frameworks

Bootstrap · React

Backend & tools

Node · Git · Docker · Tests

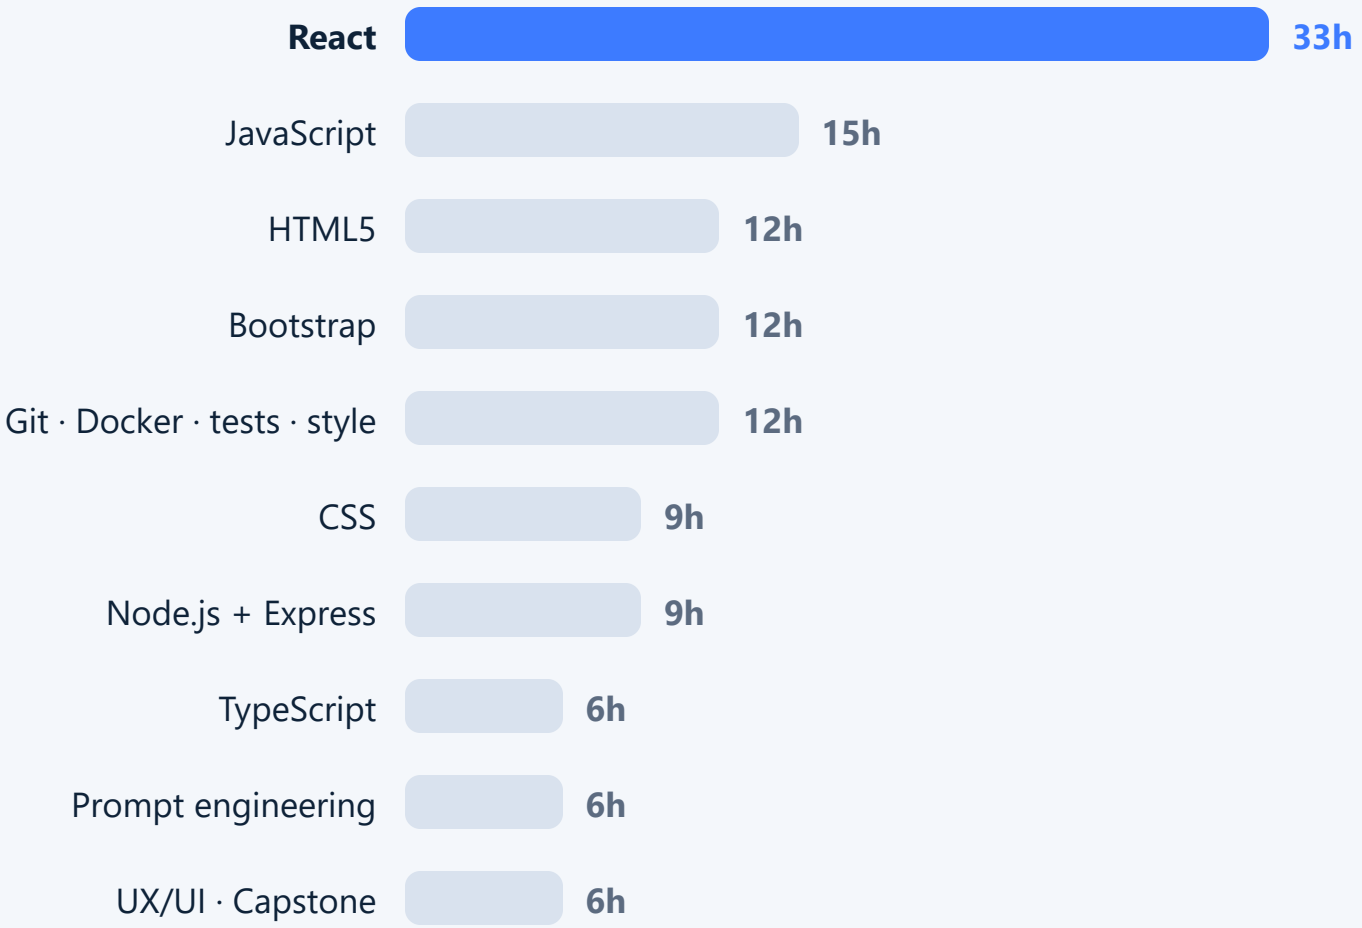

Capstone

Our learning platform

THE TRAINING

Where the 120 contact hours went

React was over a quarter of the course

- Components and props
- State and effects
- Lists and conditional rendering
- Pages with React Router

BEYOND CODE

Skills that turn code into a career

Freelancing

- Finding clients
- Writing proposals
- Pricing my time

English

- Technical vocabulary
- Presenting ideas
- Interview answers

Writing a CV

- One clear page
- Projects and results first
- Tailored per job

Personal branding

- LinkedIn profile
- GitHub portfolio
- Sharing what I build

BEYOND CODE · RESULTS

I put it to work: freelancing

3

freelancing gigs completed during the course

- **Certificate of Completion**
  Finished the React Frontend track
- **Certificate of Achievement**
  Only for students who completed freelancing gigs
- **Real client work**
  Proposals, communication and delivering on time

Certificate of Completion

For finishing the React Frontend Web Developer track

Certificate of Achievement

Given only for completing real freelancing gigs

THE CAPSTONE PROJECT

Watching isn’t learning.

Our team built one place to watch a lesson, practise the code and prove you understood it.

Passive watching

Hours of video, little practice

No proof of learning

Nothing checks understanding

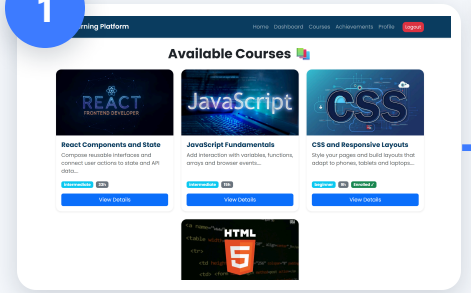

Scattered tools

Video in one tab, editor in another

THE CAPSTONE PROJECT

Learn → practise → prove it

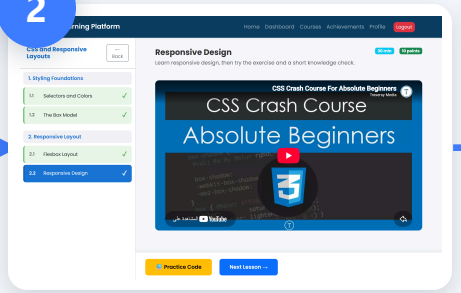

1

Pick a course

Catalog with levels

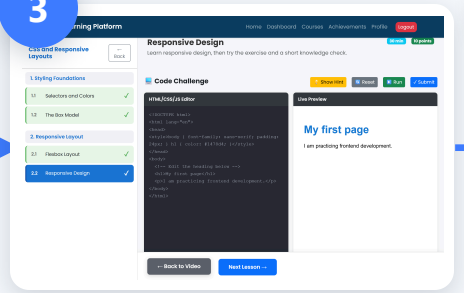

2

Watch the lesson

Topics and video

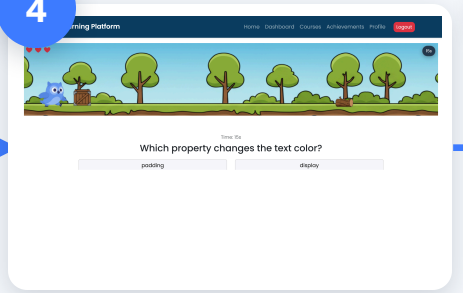

3

Practise the code

Editor + live preview

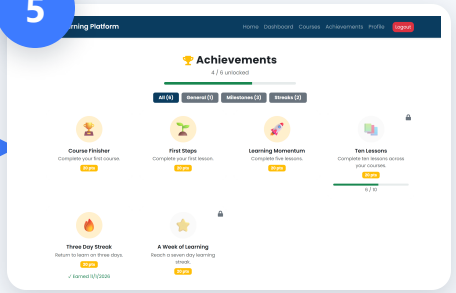

4

Pass the quiz game

Lives and a timer

5

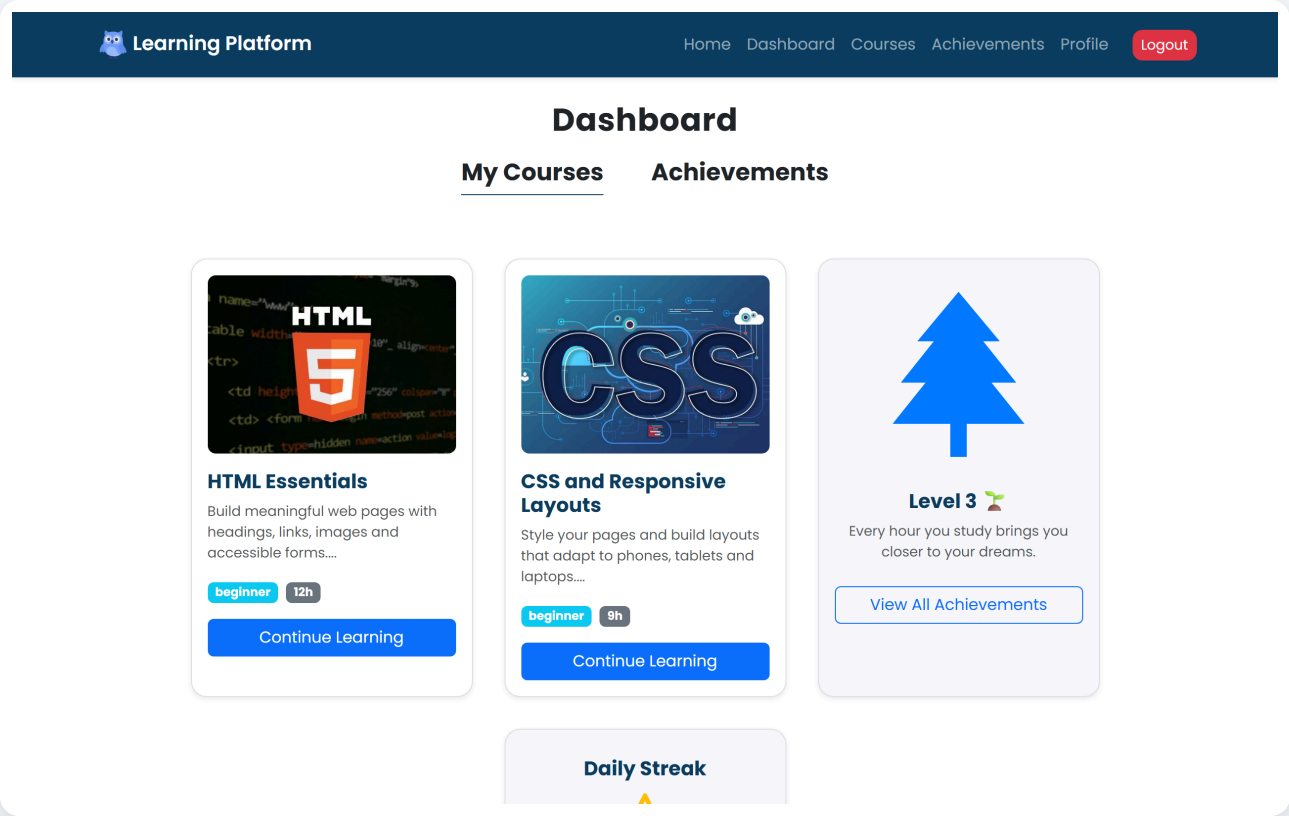

Earn badges

Streaks, tree, points

The rule that makes it active: you only move to the next lesson after passing the quiz.

MY PART · DESIGN

UX principles I applied

The dashboard: courses as cards, progress on the side

One clear next step

One main button on each screen

Progress you can see

Tree, streak and badges

Same look

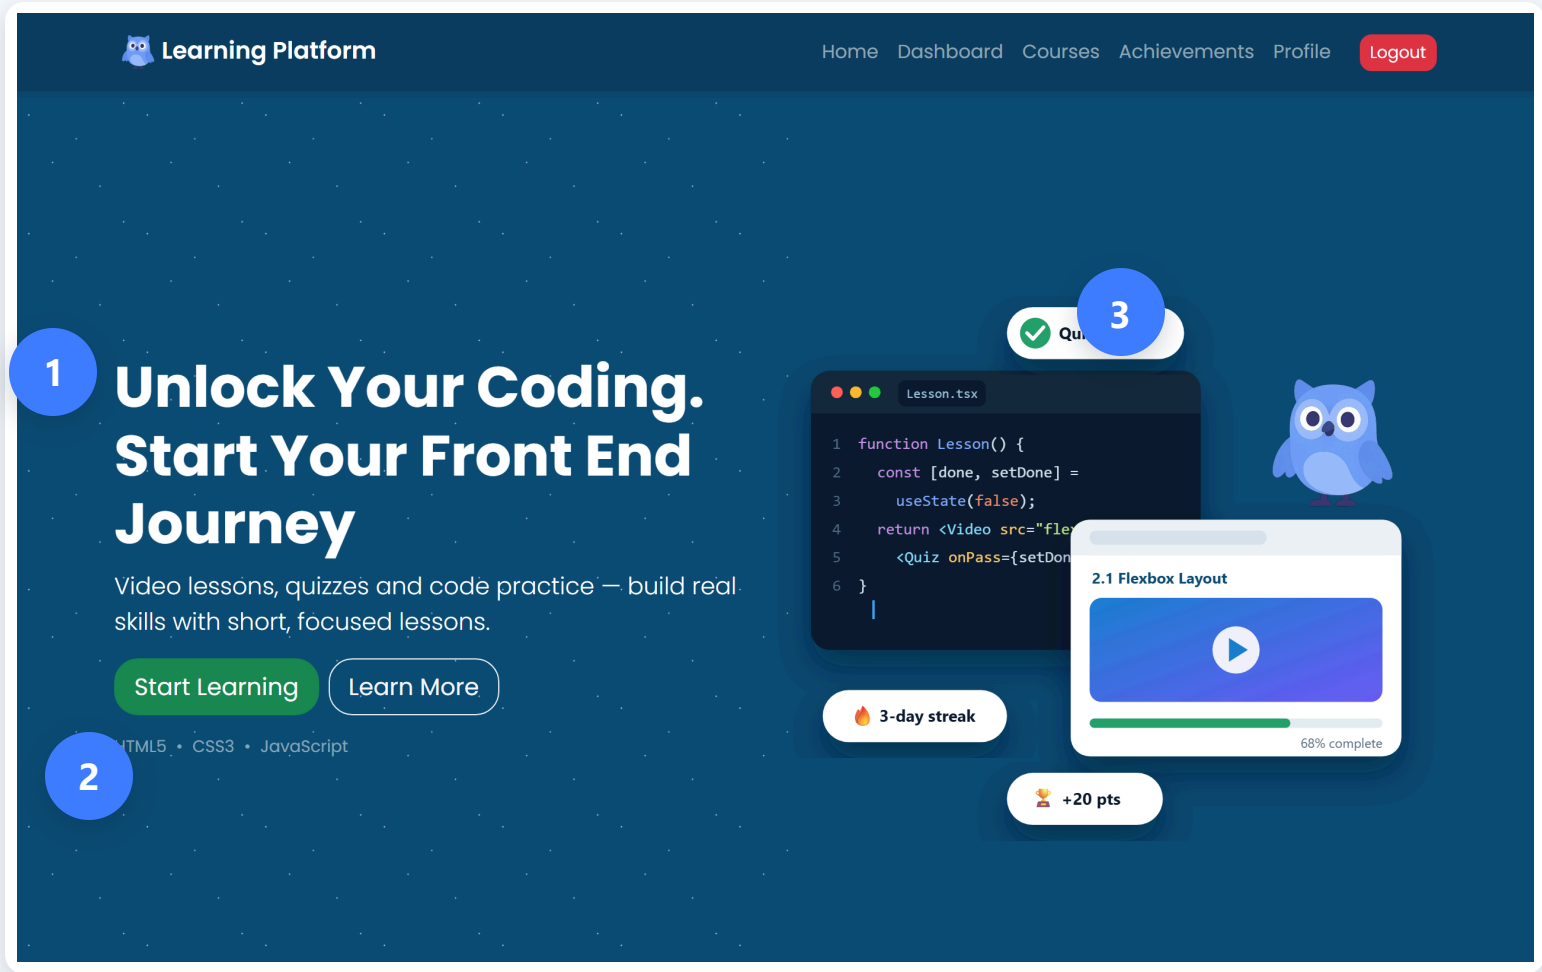

Shared cards, colours, spacing

Fits any screen

Bootstrap grid, phone to laptop

MY PART · LANDING PAGE

The first impression

1 **A clear promise**

The headline says what you'll learn

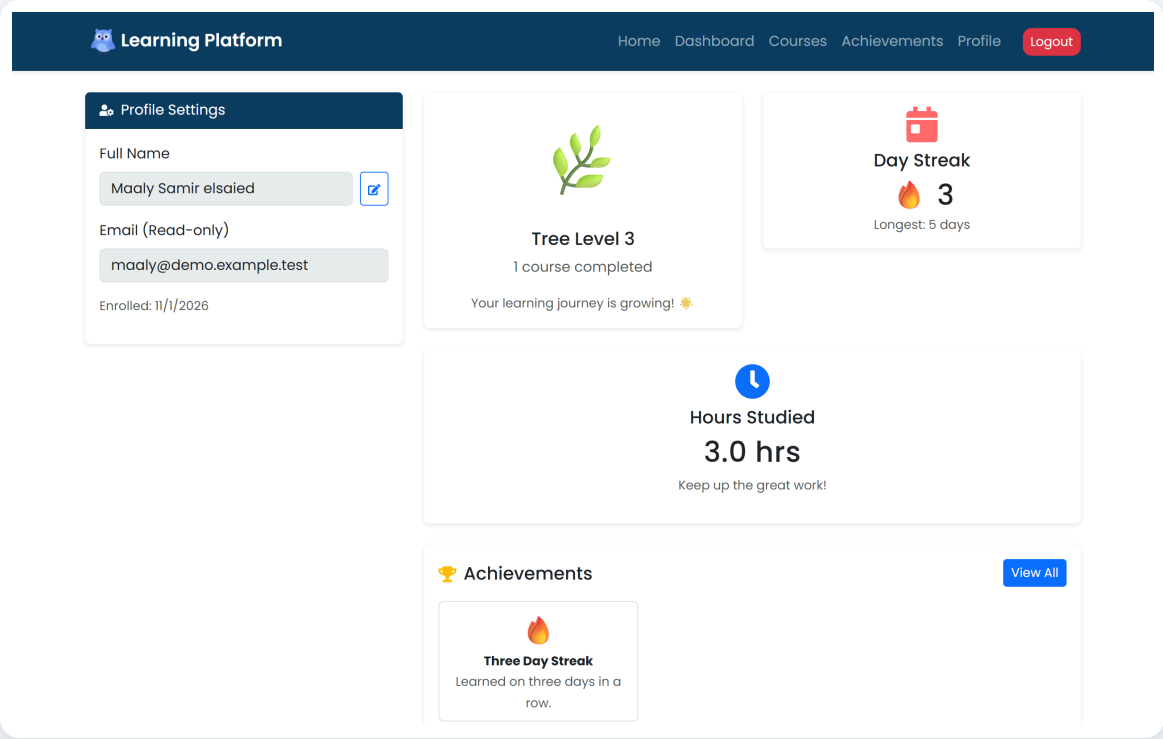

2 **One main action**

Start Learning leads to the courses

3 **Show, don't tell**

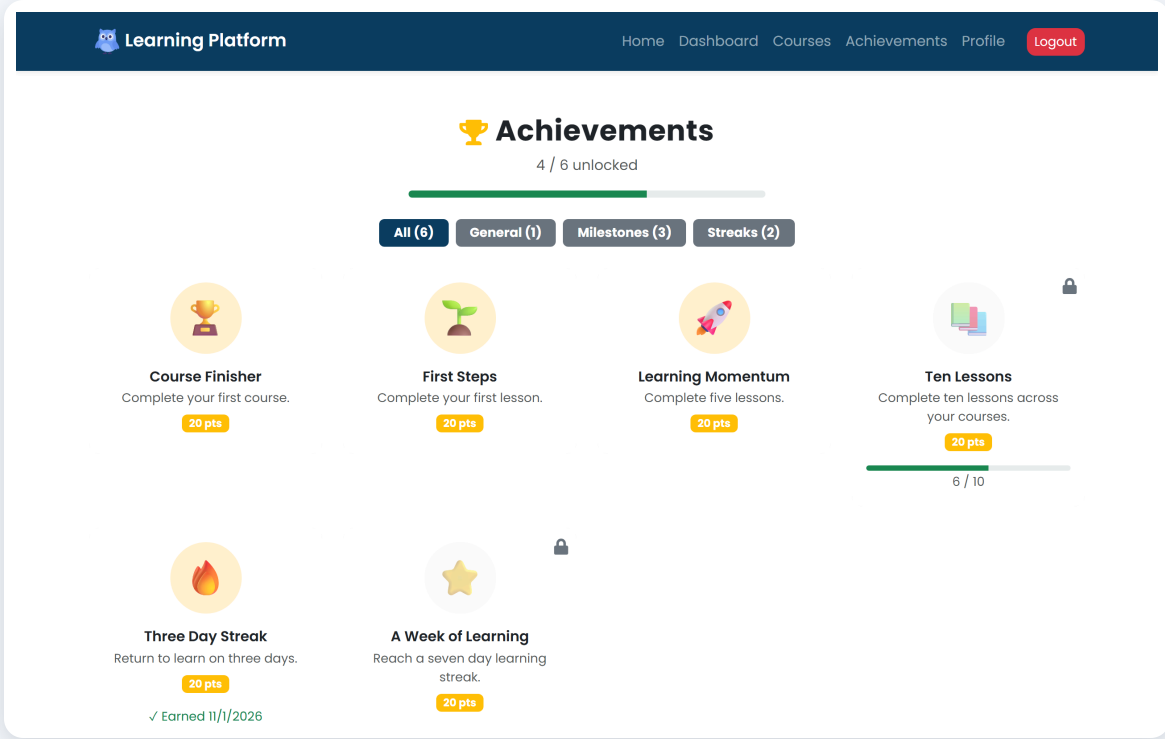

Code, a lesson and badges in one picture

Profile and achievements

Profile

Editable name, streak, study hours and tree level

Achievements

Filters, unlocked badges and progress to the next goal

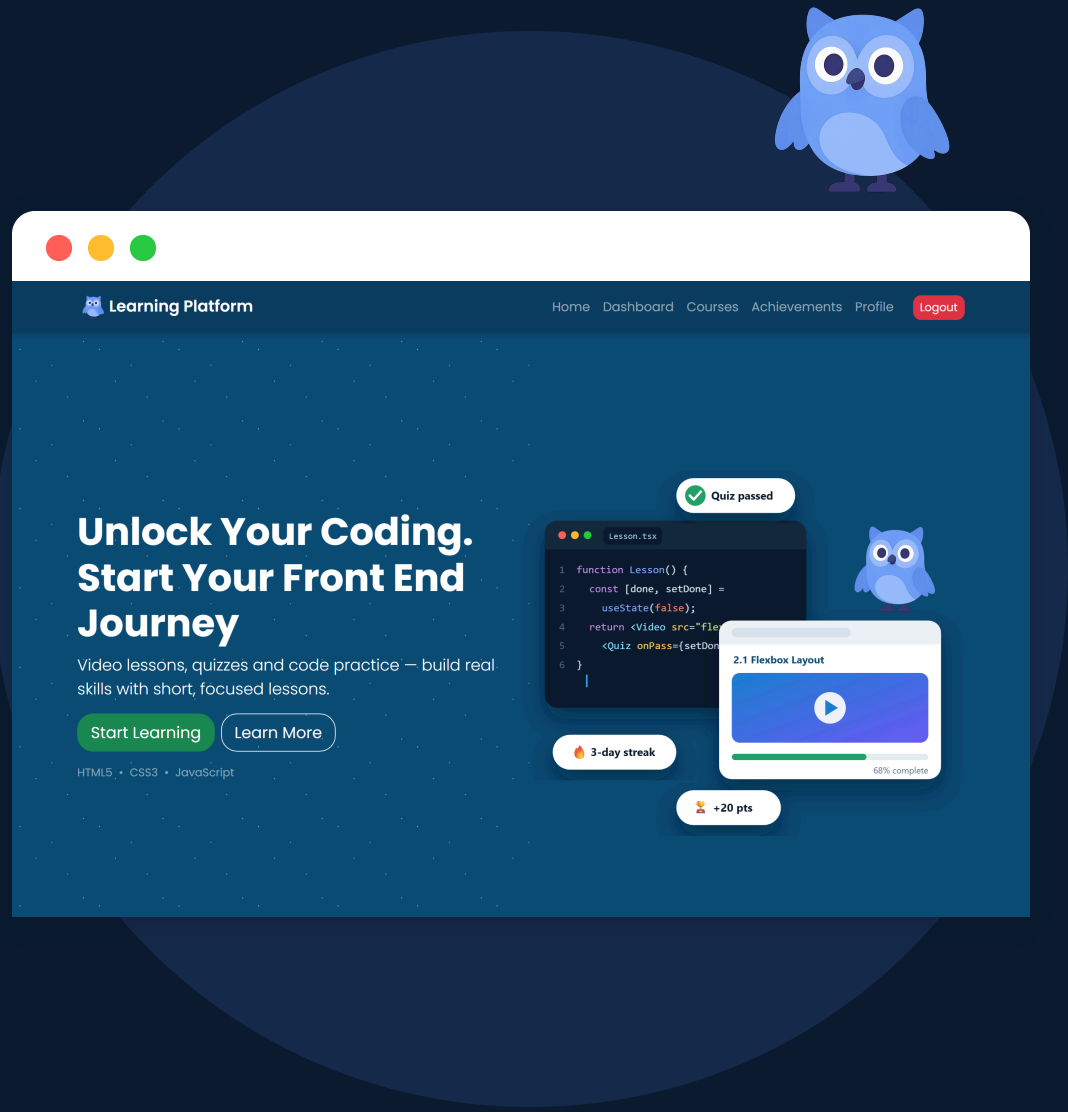

LIVE DEMO

Let’s see the site working live!

WHAT YOU’LL SEE

1. **The first impression**
   The landing page and its main button
2. **A learner’s profile**
   Streak, study hours and the growing tree
3. **Achievements**
   Filter badges and see what’s next

Thank you — questions?
